PROFESSIONAL SUMMARY

Final-year Computer Engineering undergraduate at Thapar Institute of Engineering & Technology (CGPA: 9.00/10). Strong fundamentals in Python, C++, data structures, algorithms, and OOP. Hands-on experience building and deploying end-to-end ML systems. Certified in Advanced Excel (Macquarie University via Coursera). Seeking full-time opportunities in software development, machine learning, or data-centric roles.

EDUCATION

B.E. – Computer Engineering | Thapar Institute of Engineering & Technology Aug 2023 – May 2027
CGPA: 9.00/10.0 | Relevant Coursework: DSA, OOP, DBMS, Machine Learning, OS, Computer Networks, Web Development

Higher Secondary (Class XII – PCM + CS) | Gems Cambridge International School, Batala April 2023
Percentage: 96.2% | Subjects: Physics, Chemistry, Mathematics, Computer Science

TECHNICAL SKILLS

Languages: Python, C++, C, SQL | Web: HTML, CSS | Databases: MySQL, Data Modelling, ER Diagrams
AI/ML: Supervised & Unsupervised Learning, Classification, Regression, Model Evaluation, GridSearchCV
Tools: Git, GitHub, Streamlit, VS Code, Microsoft Excel (Advanced – Pivot Tables, VLOOKUP, Macros, VBA, Power Query)

PROJECTS

Student Stress Monitoring System

Oct 2024 – Dec 2024

Academic Project | Python, Machine Learning

- Trained and benchmarked Random Forest, SVM, and Logistic Regression on physiological and behavioral data; Random Forest outperformed both with 91.4% accuracy across three stress categories, favoring it for deployment.
- Identified heart-rate variability and sleep-duration features as the strongest stress predictors via correlation-based selection, improving model accuracy by ~12% over the unfiltered baseline.
- Validated results with 5-fold cross-validation across the full dataset to confirm the model generalized beyond the training sample rather than overfitting to a single train-test split.
- Built an automated alert module flagging students when predicted stress crossed a defined threshold, enabling intervention within minutes of a high-risk reading instead of delayed manual review.

India Rainfall Predictor

Apr 2025 – Jun 2025

Personal Project | Python, Machine Learning, Streamlit | Live: rainfall-prediction-india.streamlit.app

- Developed and deployed a binary rainfall classification web app for 5 major Indian cities on Streamlit Community Cloud; chose Random Forest (95% accuracy) over Logistic Regression (92%) after finding it caught more true rainy days, since a missed rainy day cost more than a false alarm.
- Engineered a custom India-specific seasonal feature (Summer/Monsoon/Post-Monsoon/Winter) after noticing the default Southern Hemisphere seasons misclassified Indian monsoon patterns, then built a pipeline spanning 15+ variables including AQI and UV Index.
- Applied StandardScaler and One-Hot Encoding during preprocessing to normalize 15+ skewed weather metrics and convert city/season categories into model-ready features.
- Deployed the trained model as a public Streamlit app serving live predictions for 5 cities so users can check rainfall odds in under 5 seconds without running any code locally.

Cyclistic Bike-Share Capstone – Case Study

Apr 2026 – Jun 2026

Google Data Analytics Capstone | Python (pandas), SQLite, matplotlib

- Analyzed 6 months of bike-share ride data with Python (pandas) and SQLite, finding casual riders averaged 2x longer weekend leisure rides while members rode shorter, weekday commute trips.
- Visualized the weekday-vs-weekend usage split with matplotlib and recommended a weekend-focused membership promotion targeting casual riders' actual riding pattern.
- Followed the full Google Data Analytics workflow across all 5 phases (ask, prepare, process, analyze, share) and documented findings in a structured case study report.

CERTIFICATIONS

Google Data Analytics Professional Certificate – Google via Coursera (Jun 2026) | Topics: Data Cleaning, SQL, Tableau, Python, Spreadsheets, Data Visualization, Case Studies

Excel Skills for Business Specialization – Macquarie University via Coursera (Jul 2025) | Topics: Pivot Tables, Advanced Formulas, Macros, VBA, Power Query, Dashboard Design

KEY STRENGTHS

Top 10% CGPA | Independently completed advanced certification alongside full-time coursework | Version-controlled team projects via Git/GitHub | Languages: English (Professional), Hindi (Native)
