

Professional Summary

Dedicated and results-oriented Computer Engineering student with a strong foundation in problem-solving and software development. Demonstrates motivation to embrace challenges, continuously enhance technical expertise, and stay current with emerging technologies. Possesses effective communication, teamwork, and leadership abilities, with a commitment to delivering high-quality solutions in dynamic environments.

Education

Thapar Institute of Engineering and Technology, Patiala, Punjab **2023 – Present**
Bachelor of Technology in Computer Engineering

Green Land Convent School, Civil City, Ludhiana, Punjab **2009 – 2023**
Senior Secondary (Non-Medical Stream)

Certificates And Achievements

Awarded the Perfect Badge for excellence in academics, discipline, and overall performance

Drone Technology Bootcamp – Thapar Institute of Engineering And Technology And NIT Jalandhar (Aug 2025)

Deloitte Data Analytics Certification

Academics

Class 12th CBSE: **93 %**

Class 10th CBSE: **94.9%**

Current Cgpa: **9.14/10**

Skills

Technical Skills:

- Data Structures & Algorithms
- Machine Learning
- Artificial Intelligence
- Data Science
- Python, C++
- Object-Oriented Programming
- Frontend Development
- Database Management System
- Operating Systems
- MS Excel, Word & PowerPoint

Non-Technical Skills:

- Communication
- Leadership
- Public Speaking

Projects

Sahayak : School Management Portal

Built a portal to automate school workflows such as class administration, student enrollment, attendance management, content sharing, and worksheet review.

Eliminated manual and disconnected processes, improving transparency and record accuracy for teachers.

Reduced data duplication and supported digital workflow automation.

Collaborated in a team of four and contributed to system design and feature development.

Tech Stack: Vanilla Javascript, MVC Backend Structure, Node.js, PostgreSQL(Neon), n8n automation, JWT Auth

Bird Call Classification using Audio Signals | *Machine Learning Project*

Developed an automated bird species classification system using audio recordings and mel-spectrogram features.

Extracted features using STFT and Librosa with 128 mel bands and log-scaled spectrogram normalization.

Implemented CNN baseline and EfficientNet transfer learning models with Mixup augmentation.

Improved accuracy from 49.25% to 89.98% using EfficientNet-B3, EMA, and label smoothing.

Tools: Python, Deep Learning, Librosa, CNN, EfficientNet.

Terminal

Created a custom terminal using C++ with basic OS-style command execution and input handling.

Key Strengths

Problem-Solving – Proficient in Data Structures and Algorithms, with experience tackling complex coding challenges.

Frontend Development – Skilled in HTML, CSS, and JavaScript, focusing on responsive and user-centric interfaces.

Work Ethic – Demonstrates strong work ethic through punctuality and dedication.

Goal-Oriented – Maintains focus and determination in achieving both individual and team objectives.

Adaptability – Quick learner who embraces new technologies and evolving industry trends.
